

Special Library Automation for Lotus Notes™ and Domino™

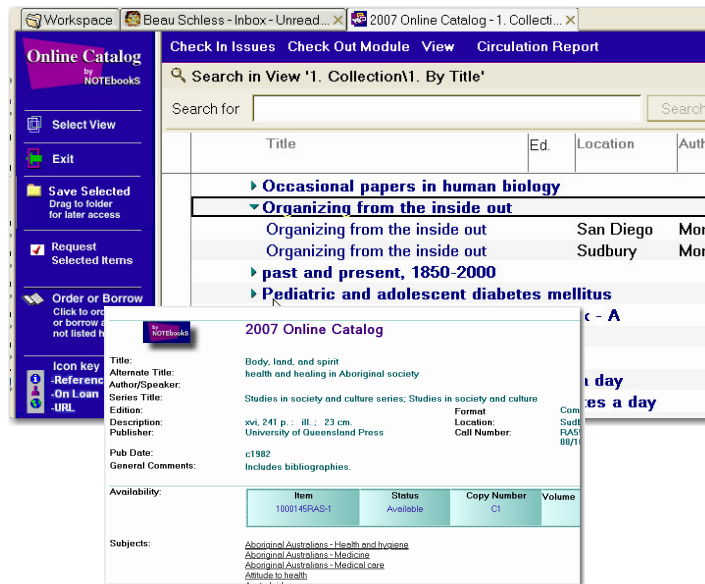

NOTEbookS Library Automation™ is an easy-to-use, powerful bridge between library automation and knowledge management that runs natively on IBM Lotus Notes™ and on the web through Domino™. Used by corporate, government and institutional special libraries it is designed for both single site libraries and enterprise-wide consortiums. NOTEbookS reduces both the risk and cost of library automation by leveraging your organization's investment in Lotus Notes/Domino infrastructure and training.

NOTEbookS Features

- ◆ Easy to navigate consolidation of corporate knowledge and collections into a cohesive, managed set of repositories.
- ◆ “Object oriented” administration to simplify collection, serials, and research administration
- ◆ Modular design allows customization without programming
- ◆ One-stop full text search of bibliographic data as well as attached Word™ and Powerpoint™ documents
- ◆ Common look and feel for easy navigation
- ◆ Library 2.0 patron collaboration

Robert A. Schless & Co. specializes in developing innovative turnkey knowledge management and library automation software for medium to large businesses. NOTEbookS Library Automation is used worldwide in over 150 libraries

NOTEbookS runs on Lotus Notes and Domino 6.0 or newer.

NOTEbookS is modular in design so you can purchase either an integrated system with full library automation functionality or just those features you need. Modules include:

- | | |
|-----------------------|-------------------------|
| Home Page/Portal | Research |
| Online Catalog | ◆ Administration |
| ◆ OPAC | ◆ Knowledgebase |
| ◆ Circulation | ◆ Experts database |
| ◆ Acquisitions | Web Retriever |
| Serials | MARC Importer |
| ◆ OPAC | Integrated Scanning and |
| ◆ Serials Circulation | OCR |
| ◆ Routing | |

NOTEbookS Library Automation

What's on Your Desktop?

NOTEbookS ILS™ runs on IBM Lotus Notes and on PC and Macintosh web browsers. So if you have Notes on your desktop (or Domino on your servers) you've come to the right place! NOTEbookS is an easy-to-use, powerful bridge between library automation and knowledge management for corporate, government and institutional special libraries. Running a solo library? Get empowered! Managing an enterprise-wide corporate consortium? Get integrated! Worried about how your ILS will fit into your IT department? Worry no longer!

Powerful Administration Tools

In these days of tighter budgets corporate and institutional special libraries need to "do more with less". At the same time libraries are being called on to reinvent themselves as the hub of their institutions' information resources; they've become the "keeper of corporate knowledge". NOTEbookS provides powerful administrative tools to maximize the use of library resources, automating many tasks and making use of powerful workflows to simplify repetitive administrative procedures. Simultaneously NOTEbookS provides a cohesive platform to organize your internal documents, pictures, external resources and collections.

Going Native

Many of today's ILS vendors classify themselves as web-based integrated library systems, capable of running natively in any IT infrastructure. But these systems require specialized administrative and operational skills, since they aren't native to anything but themselves. At NOTEbookS we take a different approach. Using our background in library science and library automation we've chosen a platform which is the basis of many IT departments' infrastructure: Lotus Notes/Domino. We've taken advantage of the features of Notes to create a powerful, stable ILS that fits on every desktop in your organization and that everyone one in your company will be familiar with, including your patrons and your library staff. Does your IT department speak "Notes"? We're the only native game in town!

Managing the Special Library

The virtual team that administers an ILS today wears many hats. Besides the traditional library staff that performs the library functions of cataloging, circulation control, serials administration and research there are team members that include IT administrators who manage the systems' servers, security personnel managing user IDs and passwords, programmers who manage the application code, and network administrators who keep the intranet running. The catchphrase "doing more with less" becomes much more relevant when all these players are considered. NOTEbookS takes into account the whole virtual team that administers your ILS and provides productivity tools for each of the team members.

What Happens Next?

Want to take a tour of NOTEbookS? We're happy to offer onsite or web-based demos. Bring your IT staff along so they can see how easy it is to integrate NOTEbookS into their Domino environment. Just give us a call and we'll make all the arrangements!

Interested in setting up a trial? Contact us and we'll do the rest!
